List of Figures **4**

List of Tables **5**

1 Introduction **6**
1.1 Motivation 6
1.2 Acknowledgements 8

2 Bibliographic Review **10**
2.1 Binary IIS Algorithm 10
2.2 Risk-averse Ultimate Pit Problem 11

3 Binary IIS Algorithm **13**
3.1 Introduction 13
3.2 Infeasible irreducible subsystems 15
3.2.1 The deterministic equivalent formulation 15
3.2.2 Irreducibly infeasible subsystems 16
3.2.3 IIS and CCP Problems 17
3.3 Strategies to solve binary CCP 19
3.3.1 Efficient Upper Bound Generation 19
3.3.2 The choice of ϵ for binary problems 20
3.4 The algorithm 22
3.4.1 Preliminaries 22
3.4.2 IIS branch-and-cut algorithm 23
3.5 Numerical experiments 25
3.5.1 Stochastic Set Covering Problem 25
3.5.2 Vaccine Allocation Problem 28
3.6 Conclusions 31

4 Risk-averse UP problem **33**
4.1 Introduction 33
4.2 Ultimate Pit problem and nested pits 34
4.2.1 UP problem 34
4.2.2 Nested pits 36

4.3 Risk measurement 37
4.3.1 Defining risk under ore grade uncertainty 37
4.3.2 The Entropic risk measure 39
4.4 Computational results 39
4.4.1 Small mine 40
4.4.2 Andina case 43
4.5 Conclusions 46

5 Bibliography **47**

A Risk-averse UP Problem **51**
A.1 Mathematical proofs 51
A.1.1 Risk-nestedness for the UP problem of the entropic measure 51
A.1.2 Proof of Lemma 1 52
A.1.3 Proof of Lemma 2 52
A.2 Other Lemmas and Propositions of interest 53
A.3 Entropic risk objective function linearization 54

List of Figures

1.1 Number of publications in Scopus under the tag *stochastic optimization* from 2000 to 2019. 6

3.1 The set Q. 17
3.2 Performance comparison between instances. 29

4.1 Example of nested pits. 36
4.2 Three blocks. 38
4.3 Topology of the small mine: blue means the block is part of set of precedent blocks of block b. 40
4.4 Configuration of the blocks in the small mine. 41
4.5 Configuration of the pits obtained with different values of α and changing the variance-covariance configuration. 42
4.6 Configuration of the pits obtained with different values of β. . . . 42
4.7 Negative profits per scenario for the Andina case. 45
4.8 Comparing pits of both models. 45

A.1 Subgradient linear approximation of $\exp(x)$ using $K = 4$ support points where $U = \{-2, -1, 0, 1\}$. 55

List of Tables

3.1 Comparison of performance between Gurobi and IISBAC using different sample sizes in `scp41`. 27
3.2 Comparison of performance between Gurobi and IISBAC using different sample sizes in `scpa1`. 28
3.3 Problem sizes for vaccination test instances. $^{*}\alpha = 0.05$ 29
3.4 Larger samples (1,000 and 2,000) results using $\alpha = 0.05$. * final gap 1.5%. 30

4.1 Comparison of mining preference under CVaR. 38
4.2 Table of descriptive statistics for NP of the out of sample results. 44
4.3 Table of descriptive statistics for Ent of the out of sample results. 44
